

TECHNICAL DATA SHEET

Bergamot Fragrance Oil

Product Name: Bergamot Fragrance Oil

Olfactory Classification: Bergamot Fragrance Oil belongs to the Citrus-Aromatic fragrance family, characterized by a distinctly fresh, clean, and subtly powdery profile. The composition combines citrus, herbal, and aromatic notes with a soft musky base, creating a light and energizing olfactory character.

Fragrance Oil Description: The composition is refreshing, elegant, and well-balanced, with medium intensity and stable diffusion. The fragrance profile is citrusy, aromatic, and soft, with a pronounced effect of cleanliness and lightness. The opening is formed through a combination of bergamot, verbena, and lemon. Bergamot provides characteristic citrus freshness with a subtle floral nuance, verbena contributes green and herbal lightness, while lemon introduces a bright and energetic citrus note. This combination creates a luminous and dynamic first impression.

In the heart of the composition, an aromatic-fresh accord develops, dominated by freesia, mint, and ginger. Freesia provides delicate floral softness, mint contributes a cool and clean sensation of freshness, while ginger introduces subtle spicy warmth and additional vibrancy to the composition. This combination forms a harmonious and refreshing heart of the fragrance.

The base structure is built around musk and powdery accords. Musk provides softness and longevity, while powdery accords contribute an elegant and clean finish. The dry-down is light, pleasant, and long-lasting, with a pronounced sensation of sophisticated freshness.

The dominant accords of this composition include citrus fresh, aromatic herbal, musky soft, and powdery clean facets, which together create a modern and highly commercially appealing fragrance profile. Citrus and aromatic aspects remain dominant throughout the fragrance evolution, while the base contributes stability and extended longevity.

Application: Bergamot Fragrance Oil is intended for use in fragrance formulations, including scented candles, wax applications, and other perfumery products. Individual

TECHNICAL DATA SHEET

testing is recommended in order to determine the optimal concentration depending on the type of base and the desired fragrance intensity.

For wax-based formulations, it is recommended to incorporate the fragrance during the appropriate liquid phase in order to achieve even dispersion. For maximum permitted concentrations, consultation of the IFRA certificate is required.

The fragrance demonstrates good stability and uniform diffusion, with a pronounced and long-lasting citrus-aromatic character.

The fragrance oil is manufactured in accordance with European regulations (CLP Regulation EC No. 1907/2006 and 1223/2009/EC) and French IFRA standards.
