

TECHNICAL DATA SHEET

Black Cherry Fragrance Oil

Product Name: Black Cherry Fragrance Oil

Olfactory Classification: Black Cherry Fragrance Oil belongs to the Fruity–Oriental fragrance family, characterized by a distinctly warm, dark, and gourmand profile. The composition combines rich notes of cherry and plum with warm accords of tonka bean, tobacco, and vanilla, supported by a resinous woody base that enhances depth and longevity.

Fragrance Oil Description: The composition is intense, rich, and sophisticated, with medium to strong intensity and stable diffusion. The fragrance profile is sweet, fruity, and warm, with a pronounced oriental character. The opening is formed through a combination of plum, cherry, and almond. Plum provides dense and slightly wine-like fruity sweetness, cherry contributes juicy and intense fruity richness, while almond introduces a subtle woody and sweet nutty nuance. This combination creates a rich and expressive first impression.

In the heart of the composition, a complex gourmand-oriental accord develops, dominated by tonka bean, jasmine, and tobacco. Tonka bean provides warm vanilla-spicy richness, jasmine contributes elegant floral nuances, while tobacco introduces an aromatic, smoky, and deep structure that enhances the oriental character of the composition. This combination forms a stable and sophisticated heart of the fragrance.

The base structure is built around sandalwood, benzoin, and vanilla. Sandalwood provides a creamy woody foundation, benzoin contributes resinous and balsamic depth, while vanilla introduces warm and enveloping sweetness. The dry-down is rich, sensual, and long-lasting, with a pronounced sensation of warmth and sensory fullness.

The dominant accords of this composition include fruity dark, oriental gourmand, tobacco warm, and vanilla balsamic facets, which together create an intense and highly commercially attractive fragrance profile. Fruity and oriental aspects remain dominant throughout the fragrance evolution, while the base contributes stability and extended longevity.

TECHNICAL DATA SHEET

Application: Black Cherry Fragrance Oil is intended for use in fragrance formulations, including scented candles, wax applications, and other perfumery products. Individual testing is recommended in order to determine the optimal concentration depending on the type of base and the desired fragrance intensity.

For wax-based formulations, it is recommended to incorporate the fragrance during the appropriate liquid phase in order to achieve even dispersion. For maximum permitted concentrations, consultation of the IFRA certificate is required.

The fragrance demonstrates good stability and uniform diffusion, with a pronounced and long-lasting fruity-oriental character.
