

## TECHNICAL DATA SHEET

### Satin Pearl – Fragrance Oil

**Product name:** Satin Pearl Fragrance Oil

**Olfactory classification:**

Perle de Satin Fragrance Oil belongs to the fresh–aromatic fragrance family, characterized by a clean, slightly camphoraceous, and elegant profile. The composition combines citrus, aromatic, and floral notes with a subtle woody–marine base that contributes depth and lasting performance.

**Fragrance oil description:**

The composition is bright, clean, and refreshing, with a medium intensity and stable diffusion. The fragrance profile is elegant, soft, and airy, with a pronounced effect of cleanliness and freshness. The opening is formed through a combination of orange, lavandin, and geranium. Orange provides a fresh citrus note, lavandin introduces an aromatic and slightly camphoraceous dimension, while geranium contributes a floral–green nuance, creating a crisp and refreshing initial impression.

In the heart of the composition, an aromatic–floral accord develops, dominated by mint, camphor, and white florals. Mint provides an intense cooling freshness, camphor contributes a sensation of purity and clarity, while white florals introduce a soft floral aspect that smooths the aromatic tones. Together, these notes create a balanced and purifying fragrance core.

The base structure is founded on sandalwood, grapefruit, and amber. Sandalwood provides a creamy woody foundation, grapefruit contributes subtle citrus bitterness and freshness, while amber introduces warmth and stability. The dry-down is clean, gently warm, and long-lasting, with discreet marine and woody nuances that complete the composition.

The dominant accords of this composition include fresh clean, aromatic herbal, citrus bitter, and woody soft facets, which together create an elegant and commercially appealing fragrance profile. The fresh and aromatic aspects remain dominant throughout the fragrance evolution, while the base ensures stability and prolonged performance.

## TECHNICAL DATA SHEET

### **Application:**

Perle de Satin Fragrance Oil is intended for use in textile and pillow sprays, as well as room mist formulations. The recommended concentration in pillow and textile spray formulations is approximately 3%, combined with a demineralized water base (approximately 95%). The addition of a preservative at around 2% is recommended to protect the formulation from microbiological contamination, with appropriate adjustment of the remaining components.

For optimal homogenization, the recommended mixing order is: fragrance oil → preservative → water, followed by gentle shaking before use. Maximum permitted concentrations should be verified according to IFRA Category 10B guidelines. The fragrance demonstrates good stability in water-based systems and provides a long-lasting and pleasant sensation of cleanliness.
