

TECHNICAL DATA SHEET

Product Name: 106 Candle Fragrance Oil.

Olfactory classification: 106 Fragrance Oil belongs to the powdery floral, suede woody and mineral amber fragrance groups, with a pronounced powdery, fruity-floral and elegantly woody character. The composition combines notes of violet, apricot, saffron, water lily, suede, cedarwood, musk, mineral amber and patchouli, creating a sophisticated fragrance with a soft floral opening, a luxurious leathery-woody heart and a deep ambery-earthly base.

Fragrance oil description: The composition is elegant, layered and distinctly sophisticated, with powdery floral nuances, a soft leathery texture and a mineral-woody finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around violet, apricot and saffron. Violet provides delicate powdery florality, while apricot contributes soft fruity sweetness and roundness. Saffron introduces warm, subtly spicy and discreetly leathery depth, creating a complex and intriguing opening. Water lily, suede and cedarwood develop in the heart of the fragrance. Water lily brings light aquatic-floral freshness, while suede provides a soft, velvety and luxurious leather character. Cedarwood gives the heart a firm, dry and elegant woody structure, while further accentuating its sophisticated profile. The base is built around musk, mineral amber and patchouli. Musk provides warm and sensual softness, while mineral amber contributes clean, subtly saline and luminous ambery depth. Patchouli introduces an earthy and discreetly smoky nuance that rounds out the composition and extends its longevity. The dominant accords include powdery violet, soft apricot, saffron suede, mineral amber, dry cedar and earthy patchouli. The fragrance leaves an elegant, warm and distinctly sophisticated impression.

Applications: 106 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for powdery, leathery, woody, ambery and sophisticated niche collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
