

TECHNICAL DATA SHEET

Product Name: 107 Candle Fragrance Oil.

Olfactory classification: 107 Fragrance Oil belongs to the aromatic woody, lavender tobacco and soft vanilla musk fragrance groups, with a pronounced camphoraceous, aromatic, woody and warm character. The composition combines notes of camphor wood, lemon, anise, lavender, a woody accord, tobacco, musk and vanilla, creating a sophisticated fragrance with a fresh aromatic opening, a warm woody heart and a soft tobacco-vanilla base.

Fragrance oil description: The composition is fresh, aromatic and distinctly woody, with subtle spicy nuances and a warm, soft finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around camphor wood, lemon and anise. Camphor wood provides clean, cool and woody freshness, while lemon contributes bright citrus vibrancy and mild tangy sharpness. Anise introduces a soft, aromatic and discreetly sweet nuance, creating a dynamic and distinctive opening. Lavender and a woody accord develop in the heart of the fragrance. Lavender provides a clean, herbal-floral character and aromatic softness, while the woody accord contributes warm, dry and rustic depth. Together, they give the heart an elegant and stable aromatic-woody profile. The base is built around tobacco, musk and vanilla. Tobacco introduces dry, subtly sweet and discreetly smoky depth, while musk contributes a soft and sensual trail. Vanilla rounds out the composition with warm, creamy sweetness and softens the more robust woody and tobacco tones. The dominant accords include camphor wood, fresh lemon, aromatic anise, lavender, dry woods, tobacco, soft musk and warm vanilla. The fragrance leaves a warm, elegant and distinctly aromatic-woody impression.

Applications: 107 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for aromatic, woody, lavender, tobacco and vanilla collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
