

TECHNICAL DATA SHEET

Product Name: 112 Candle Fragrance Oil.

Olfactory classification: 112 Fragrance Oil belongs to the fresh woody, green aromatic and creamy amber musk fragrance groups, with a pronounced citrus, green, creamy and warm woody character. The composition combines notes of bergamot, aloe vera, nutmeg, fig leaf, white tea, coconut, sandalwood, amber and musk, creating a sophisticated fragrance with a fresh opening, a green-creamy heart and a warm base.

Fragrance oil description: The composition is fresh, elegant and balanced, with green aromatic nuances, a creamy tropical heart and a warm woody-musky finish. The fragrance has medium-strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around bergamot, aloe vera and nutmeg. Bergamot provides bright citrus freshness with a subtle bitter nuance, while aloe vera contributes a clean, watery and refreshing character. Nutmeg introduces warm spicy depth and additional aromatic complexity. Fig leaf, white tea and coconut develop in the heart of the fragrance. Fig leaf brings green, subtly milky and woody freshness, while white tea contributes elegant aromatic lightness and a clean character. Coconut introduces creamy tropical fullness and softness, giving the heart a warmer and more rounded profile. The base is built around sandalwood, amber and musk. Sandalwood provides creamy woody warmth and stability, while amber contributes rich balsamic depth and subtle sweetness. Musk rounds out the composition with a soft, velvety and long-lasting trail. The dominant accords include fresh bergamot, green fig leaf, white tea, creamy coconut, warm sandalwood and soft amber musk. The fragrance leaves a clean, warm and elegantly sophisticated impression.

Applications: 112 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for fresh, green, tea, woody and creamy musk collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
