

TECHNICAL DATA SHEET

Product Name: 201 Candle Fragrance Oil.

Olfactory classification: 201 Fragrance Oil belongs to the citrus floral, aromatic gourmand and soft musk fragrance groups, with a pronounced citrus, floral and warm gourmand character. The composition combines notes of mandarin, bergamot, blackcurrant, orange blossom, lavender, jasmine, vetiver, a gourmand accord, tonka bean and musk, creating a sophisticated fragrance with a bright citrus opening, a rich aromatic-floral heart and a warm, soft base.

Fragrance oil description: The composition is elegant, bright and aromatic, with pronounced citrus nuances, an opulent floral heart and a subtle gourmand finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around mandarin, bergamot and blackcurrant. Mandarin and bergamot provide vibrant citrus freshness and juicy fruity fullness, while blackcurrant contributes a rich fruity nuance with subtle tart-green depth. Orange blossom, lavender and jasmine develop in the heart of the fragrance. Orange blossom provides rich citrus-floral sweetness and brightness, while lavender contributes a clean herbal-floral character. Jasmine introduces more intense floral depth and additional sophistication, creating a harmonious and aromatic floral bouquet. The base is built around vetiver, a gourmand accord, tonka bean and musk. Vetiver provides dry, earthy and woody depth, while the gourmand accord introduces pleasant sweetness and softness. Tonka bean contributes creamy, vanilla-like and subtly almond-like nuances, while musk rounds out the composition with a soft and velvety trail. The dominant accords include sparkling citrus, blackcurrant, orange blossom, aromatic lavender, jasmine, vetiver, tonka bean, gourmand accord and soft musk. The fragrance leaves a warm, elegant and sophisticated floral-gourmand impression.

Applications: 201 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for citrus floral, aromatic, gourmand, tonka and soft musk collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
