

TECHNICAL DATA SHEET

Product Name: 205 Candle Fragrance Oil.

Olfactory classification: 205 Fragrance Oil belongs to the fruity floral, tobacco woody and soft gourmand fragrance groups, with a pronounced fruity, floral and warm woody-tobacco character. The composition combines notes of pink pepper, pear, brown sugar, sambac jasmine, peach, osmanthus, sandalwood, blond tobacco and musk, creating a sophisticated fragrance with a soft fruity opening, an opulent floral heart and a warm base.

Fragrance oil description: The composition is elegant, rich and velvety-fruity, with subtle gourmand nuances and a warm woody-musky finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around pink pepper, pear and brown sugar. Pink pepper provides subtle fruity-spicy piquancy, while pear contributes juicy and refreshing sweetness. Brown sugar introduces a warm caramelised nuance and gives the opening a softer gourmand character. Sambac jasmine, peach and osmanthus develop in the heart of the fragrance. Sambac jasmine provides rich and intoxicating floral depth, while peach introduces soft, velvety fruity fullness. Osmanthus contributes distinctive apricot-like and subtly leathery nuances, further enriching the elegant fruity-floral profile of the composition. The base is built around sandalwood, blond tobacco and musk. Sandalwood provides creamy woody warmth and softness, while blond tobacco contributes dry, subtly sweet and discreetly smoky depth. Musk rounds out the composition with a soft, sensual and long-lasting trail. The dominant accords include juicy pear, pink pepper, sambac jasmine, osmanthus apricot, blond tobacco, creamy sandalwood and soft musk. The fragrance leaves a warm, elegant and sophisticated fruity-tobacco impression.

Applications: 205 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for fruity floral, tobacco, gourmand and woody collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
