

TECHNICAL DATA SHEET

Product Name: 207 Candle Fragrance Oil.

Olfactory classification: 207 Fragrance Oil belongs to the fruity floral, powdery floral and gourmand patchouli fragrance groups, with a pronounced fruity, floral and warm sweet-earthy character. The composition combines notes of lemon, cherry, red berries, rose, violet, white florals, vanilla, a gourmand accord and patchouli, creating a sophisticated fragrance with a juicy fruity opening, an elegant floral heart and a warm gourmand base.

Fragrance oil description: The composition is rich, elegant and distinctly fruity-floral, with powdery nuances and a warm, creamy-gourmand finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around lemon, cherry and red berries. Lemon provides bright citrus freshness and pronounced vibrancy, while cherry and red berries contribute juicy, sweet-tart fullness and a rich fruity character. Rose, violet and white florals develop in the heart of the fragrance. Rose provides rich and elegant floral fullness, while violet contributes powdery softness and delicate sophistication. White florals introduce bright and airy florality that further enriches the heart of the composition. The base is built around vanilla, a gourmand accord and patchouli. Vanilla provides warm, creamy sweetness, while the gourmand accord contributes soft dessert-like fullness and roundness. Patchouli introduces earthy and subtly woody depth, giving the finish additional longevity and character. The dominant accords include sparkling lemon, juicy cherry, red berries, powdery violet, white florals, creamy vanilla and earthy patchouli. The fragrance leaves a warm, elegant and distinctly sophisticated fruity-gourmand impression.

Applications: 207 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for fruity floral, gourmand, powdery floral and patchouli collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
