

TECHNICAL DATA SHEET

Product Name: 210 Candle Fragrance Oil.

Olfactory classification: 210 Fragrance Oil belongs to the citrus floral, honeyed chypre and woody musk fragrance groups, with a pronounced citrus, floral, honeyed and warm woody character. The composition combines notes of lemon, grapefruit, orange, jasmine, lily of the valley, patchouli, honey, vanilla, sandalwood, cedar and musk, creating a rich and sophisticated fragrance with a sparkling opening and a deep base.

Fragrance oil description: The composition is bright, elegant and layered, with a fresh citrus opening, a rich floral-honeyed heart and a warm woody-musky finish. The fragrance has medium-strong to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around lemon, grapefruit and orange. Lemon provides pronounced citrus freshness and tangy vibrancy, while grapefruit contributes juicy bitterness and additional dynamism. Orange introduces warmer fruity fullness and rounds out the opening with a bright, sunny character. Jasmine, lily of the valley, patchouli and honey develop in the heart of the fragrance. Jasmine provides rich floral fullness and elegant depth, while lily of the valley contributes clean and airy floral freshness. Patchouli introduces an earthy and subtly dark nuance that contrasts with the brighter floral tones. Honey envelops the heart of the composition in warm, smooth and subtle gourmand sweetness. The base is built around vanilla, sandalwood, cedar, patchouli and musk. Vanilla provides warm, creamy softness, while sandalwood contributes rich and smooth woody fullness. Cedar introduces a drier and more stable woody structure, patchouli further deepens the earthy character, and musk rounds out the composition with a soft and sensual trail. The dominant accords include sparkling citrus, white florals, honeyed patchouli, creamy vanilla, warm woods and soft musk. The fragrance leaves a rich, elegant and long-lasting floral-woody impression.

Applications: 210 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for citrus, floral, honeyed, chypre and woody-musky collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
