

TECHNICAL DATA SHEET

Product Name: 214 Candle Fragrance Oil.

Olfactory classification: 214 Fragrance Oil belongs to the aromatic gourmand, powdery floral and creamy woody fragrance groups, with a pronounced aniseed, powdery and warm creamy character. The composition combines notes of liquorice, anise, orange blossom, heliotrope, coconut, vanilla, moss, musk and sandalwood, creating an unusual and sophisticated fragrance with an aromatic opening, a soft floral heart and a rich woody-musky base.

Fragrance oil description: The composition is warm, powdery and subtly exotic, with pronounced aromatic and gourmand nuances. The fragrance has medium to high intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around liquorice and anise. Liquorice provides a characteristic dark sweetness with a subtle bitterness, while anise introduces pronounced spicy and aromatic freshness. Their combination creates a distinctive, complex and slightly mysterious introduction. Orange blossom, heliotrope and coconut unfold in the heart. Orange blossom contributes luminous citrus-floral freshness and gentle sweetness, while heliotrope introduces powdery, vanilla-like and subtly almond-like nuances. Coconut provides creamy tropical richness and further accentuates the composition's soft, sensual character. The base is built around vanilla, moss, musk and sandalwood. Vanilla provides warm gourmand sweetness and creamy softness, while moss contributes earthy and slightly damp depth. Musk creates a clean and sensual trail, and sandalwood rounds out the composition with rich, creamy-woody warmth. The dominant accords include liquorice and anise, powdery heliotrope, creamy coconut, soft musk and warm sandalwood. The fragrance leaves a warm, elegant and distinctly powdery-gourmand impression.

Applications: 214 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for gourmand, powdery, aromatic and creamy-woody collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
